1. General instruction

General introduction

- The MMG-H IE4 motors are totally enclosed, fan cooled, and three phase squirrel cage induction motors covering products from 0.75 kW up to 315 kW in frame sizes 80 to 355.

Frame size: 80-180

Frame size: 200-355

Standards

The motors comply with the standards in the following table A.

Table A

Title	DIN / VDE / EN	IEC standard	GB standard
General regulations for rotation electrical machines	DIN EN 60034-1	IEC 60034-1	GB 755-2019
Noise for rotation electrical machines	-	IEC 60034-9	GB 10069.1
AC induction motors for general use with standardized dimensions and power	DIN EN 50347	IEC 60072	GB/T 4772.1-1999 Part 1
Starting performance of single-speed three-phase cage induction motors for voltage up to and including 660 V	DIN EN 60034-12	IEC 60034-12	JB/T 8158-1999
Terminal markings and direction rotation of rotating electrical machines	DIN VDE 0530	IEC 60034-8 Part 8	GB1971-2006
Designation for type of construction, installation and terminal box position	DIN EN 60034-7	IEC 60034-7	GB/T 997-2008
IEC standard voltage	DIN IEC 60038	IEC 60038	-
Cooling methods for rotation electrical machines	DIN EN 60034-6	IEC 60034-6	GB/T 1993-1993
Mechanical vibrations of rotating electrical machines	DIN EN 60034-14	IEC 60034-14	GB 10068-2020
Degrees of protection for rotating electrical machines	DIN EN 60034-5	IEC 60034-5	GB/T 4942.1-2016

Basic

- Protection class: IP55
- Cooling method: IC411
- Efficiency class: IE4 (IEC 60034-30:2014)
- Insulation class: F

Conditions

- Altitude should be lower than 1000 m
- Ambient temperature -20 °C ~ +40 °C
- Relative humidity should be less than 90 %
- If the actual operating conditions deviate from above class, the maximum output should be adjusted according to the table E.

Voltage and frequency

- The applicable power supply for the motor can either be the power frequency or variable frequency power supply.
- The MMG-H IE4 motor can work in frequency 25-50 Hz (when the power frequency is 50 Hz)
- The allowed voltage deviation is ± 5 % according to IEC 60038.

Motor leads and connection

- All motors with single voltage have 6 leads.
- Motor connection type WYE(Y) for 3 kW and less, type DELTA(Δ) for 4 kW and above.
- For 3 kW and less of 2 pole and 4 pole, motor connection type DELTA(Δ) is also optional.

Rated output

- Rated output of the MMG-H IE4 series motor is shown in table B. Rated output refers to continuous duty according to IEC 60034-1 at a coolant temperature (CT) of 40°C and a site altitude of up to 1000 m above sea level.

High degrees of enclosure protection

- All the motors are designed for IP55; they are suitable for dusty or humid surroundings.

Stator houses chosen

- Aluminum and cast iron houses are provided for different output power. Please refer to Table I.

Cooling and ventilation

- All motors are fitted with a radial-flow fan which functions independently of the direction of rotation (cooling method IC411 to IEC 60034-6).

Mounting arrangement

According to IEC 60034-7, the mounting arrangement of MMG-H IE4 is as follows:

- B3 for frame size 80~355;
- B35 for frame size 80~355;
- B5 for frame size 80~355;
- V1 for frame size 80-355.

Thermal protection

- Motors with output 3kW and above are as standard provided with 3 pcs. PTC in serial.
- As an option 3 or 6 pcs. PT100 sensors can be provided.
- As an option of motor frame 80~355, anti-condensation heater is available for the application in humid surroundings.
- As for the rated voltage and the power of the space heater, please refer to the table H.

Vibration

- Motor rotor is dynamically balanced with half keys to vibration severity grade A of IEC 60034-14. The effective values of the vibration velocity of motors at no load should not exceed the values of grade A.

Insulation and temperature rise

- MMG-H IE4 motor adopts insulation system of class F, the insulation system comprises high-grade enameled wires and insulating sheet materials combined with solvent-free impregnating resin. The system ensures a high level of mechanical and electrical strength as well as good service ability and a long motor life.
- For frame size 280 and above, insulated bearings are provided as standard.
- The rated output of MMG-H IE4 motors are based on the temperature rise for insulation class B, therefore the motors have a generous over-load margin.

Lifting lugs

For the motors weighing more than 15kg, there will be lifting lugs on the frame. The lifting lugs vary from frames and mounting arrangements. For the detail of the liftings lugs, please refer to Table J and the outline drawings in the part Dimension Data.

355	M42	2		2		2	

1) There will be no lifting eyebolt for the motors weighing less than 15 kg.

2) The lifting eyebolts are at both opposite sides of motor, each one forming an angle of 90° with the terminal box. There will be no lifting eyebolt for the motors weighing less than 15 kg.

Note: 3) The lifting lugs are at both opposite sides of motor, each one forming an angle of 45° with the terminal box. For frame 200-250, the lifting lugs are cast in the frame. For frame 280 and above, lifting eyebolts are adopted.

4) Four lifting lugs are cast in the both opposite sides of the frame, evenly distributed to form four 90° angles. Normally, two of them are used.

5) The two eyebolts are 180° symmetrical, forming a diagonal, on the same transverse or vertical section of the frame.
